

What conditions can SCENAR treat?

SCENAR has been found to be effective for a very broad range of conditions; including, musculo-skeletal (sprains/strains, fractures) cardio-vascular, respiratory, scars, digestive, and nervous systems.

Can SCENAR help Me?

If you are in pain - then SCENAR Therapy can help you!

The effectiveness of SCENAR Therapy for Pain relief is substantial and lasts longer than other pain control methods. Macquarie University (in Sydney, Australia) randomized control trial using a SCENAR Personal device) versus conventional TENS (Transcutaneous Electrical Nerve Stimulator) and this comparative test showed 'dramatic and sustained results' with chronic pain reduction, functional improvements and general health restoration.

SCENAR therapy does not treat disease - it restores health. SCENAR therapy involves finding imbalances (asymmetries) in the body and treating them accordingly. SCENAR Therapy does not act upon one specific part of the body or organ, but on the WHOLE body. The sole purpose of SCENAR Therapy is to stimulate the body's own natural healing process.

SCENAR assists the trained clinician to identify specific points of imbalance and allows the clinician insight and ability to target the specific area/areas of imbalance.

Quotes from Clients:

"So thrilled to no longer have my scar adhesions in just 3 treatments!"

"My arthritic knees haven't felt this good in a long time! One treatment and I'm 70% better!"

.... "about 80% less pain in the achilles! It was immediate!!"

What is SCENAR?

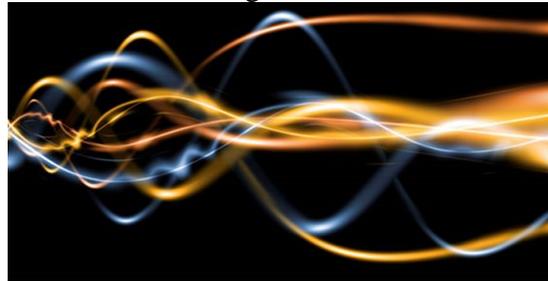

SCENAR (Self Controlled Energo Neuro Adaptive Regulator) is a hand held medical device that delivers non invasive, non toxic, computer modulated, therapeutic electro stimulation onto and through the skin. It is a biofeedback device involving no drugs and no surgery that aids the body in the self healing process. The sole purpose of SCENAR Therapy is to stimulate the body's own natural healing process. SCENAR is based on the principles of traditional Chinese medicine - acupuncture and zonal contact massage - combined with the most up to date electronic technology. SCENAR expertise focuses on the optimal points and zones to facilitate change.

Essentially, SCENAR prompts the body's own adaptive processes and facilitates restoration of homeostatic function; thereby reducing stress and inflammation and effectively changing symptoms of pain and dysfunction.

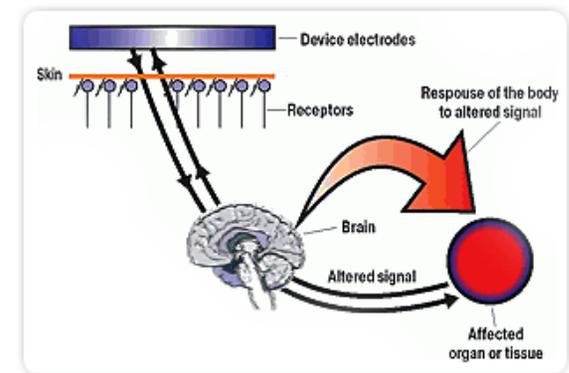

SCENAR THERAPY

The SCENAR device sends out a series of electrical signals through the skin and measures the response. Each signal is only sent out when a change, in response to the previous signal, is recorded in the electrical properties of the skin. Visible responses include reddening of the skin, numbness, stickiness (the device will have the feeling of being magnetically dragged), a change in the numerical readout and an increase in the electronic clattering of the device.

The body can get accustomed to a stable pathological state, which may have been caused by injury, or disease. SCENAR acts to activate neuro and regulatory peptides which are thought to reestablish the body's natural physiological state and are responsible for the healing process. As these peptides last up to several hours, the healing process will continue long after the treatment is over. The large quantity of neuro peptides and C-fibers in the Central Nervous System can also result in the treatment on one area aiding with other chemical imbalances, correcting sleeplessness, appetite and even behavioral problems.

How does SCENAR work?

Our health relies on the continuous exchange of information within the body. Each and every function of the body is interrelated and works in harmony with other functions - that is until stress, injury or disease disrupts that communication. The SCENAR communicates with all functions of the body through direct contact on the skin, tuning into the body's inner communication, and understanding the body's needs from the signals being sent back and forth. It is a dynamic signal.

The SCENAR responds to these signals accordingly with gentle electrical impulses that communicate with the nervous system to stimulate the body's own healing process, so your body can operate with maximum efficiency once again.

This process used by the SCENAR is called 'Reflex Biofeedback', which is an ongoing, reflex conversation that proceeds at real-time, in biological speed and requires no conscious mental activity.
